**BE GAS**

**SAFE**

Smell Gas? Call 0800 111 999

- Open windows and doors
- Check to see if the gas has been left on unlit, or the pilot light has gone out. If so, turn off the appliance and do not try to relight it until the smell of gas has been cleared from the property
- If the leak cannot be stopped by turning off an appliance, or you are uncertain whether it has been stopped, turn the main gas supply off at the meter
- Don't turn any electrical switches on and off
- Don't smoke
- Don't use matches or naked flames
- Evacuate the building and notify other tenants if you are in a communal building

It is your responsibility to ensure that your gas safety certificate is up to date and carried out by a gas safe registered engineer

Symptoms of carbon monoxide poisoning include headache, fatigue, abdominal pain, confusion, nausea and vomiting, weakness and collapse
